

Town of Andover - Example Map of Proposed Project Near Wetlands

1/28/2021

Legend

Distance from edge of project to wetlands

Extent of erosion/sediment
Limit of work controls

Proposed 20x10 ft deck
Wood construction on
6 concrete sono tube pilings

This example map uses the Town of Andover's MiMAP GIS application to locate the property of the proposed project, identify the surrounding wetlands, and measure the distance from the wetlands. The instructions on how to locate a property and measure a distance can be found on the Conservation Division's web page.

The proposed project, in this case a 20x10 ft deck, can be hand drawn or drawn using a software such as Paint or Adobe Illustrator. Please write in the distance of the proposed project to the closet edge of the wetlands as shown. Include a scale to show your measurements are relatively accurate.

Also, please include where, in relation to the proposed project, you will place the erosion, sediment, or limit of work controls. These controls should be placed before construction of the project.
